## Using a Gate Valve Lockout

Slip the lockout over the top of a valve, and once in position the cover will rotate freely thereby preventing the valve being turned.

## How To Use

**Step 1:** Ensure that the valve is in the required locked off position (on/off). Select the appropriate sized lockout for the gate valve.

**Step 1b (Optional):** Optional clip out center. Please specify if you would like the lockout with pop out center when placing your order. (For use with valves with a rising stem)

**Step 2:** Place the lockout device over the valve wheel and close, ensuring it can rotate freely around the wheel.

**Step 3:** Secure lockout with a safety padlock and attach a tag to communicate your chosen safety message. Use a hasp if more padlocks are required.
